

# SMARTFARMVS<sup>™</sup>: WIRELESS VIDEO SURVEILLANCE JUST GOT EASIER

## REDUCE THEFTS, REDUCE DRIVE TIME

### RELIABLE SURVEILLANCE WHERE YOU NEED IT

- Easy setup
- Simple operation
- No infrastructure or cell reception required – just electricity
- No ongoing costs or subscriptions
- Expands automation capabilities
- Affordable

*Don't let your pump station end up at a metal recycler.*

The disruption of theft and vandalism can be a curse on your operation. Along with costly repairs and loss of material, they can put property, profits and personal safety at risk.

As the price of metal products rises, so does the theft of raw metals. Remote agricultural installations are especially vulnerable to theft. Storage facilities, pumps and remote gates can be difficult to keep secure. Constant monitoring would increase the security of any property.

We developed the SmartFarmVS video surveillance system to reduce the time and expense required to combat theft and vandalism on your property. With SmartFarmVS technology, you can view and record activity at even the most isolated locations.

### SmartFarmVS includes

- Network-capable surveillance camera
- Camera viewing and management software
- Wireless network base station capable of 200 Mbps
- Wireless network remote station
- Cabling, mounts and enclosures

## NO MONTHLY COSTS, NO NEED FOR CELL RECEPTION

### Own, Don't Rent, Your Wireless Signal

Since SmartFarmVS uses a high-bandwidth, point-to-point wireless link, and not a cellular carrier, there are no ongoing costs for the service.

You own the connection between the remote site and home, so the connection is not costing you by the minute or by the megabyte.

Not reliant on a carrier for a signal, you can implement SmartFarmVS in remote locations that don't get reception, no problem.

## BETTER SURVEILLANCE MADE EZ

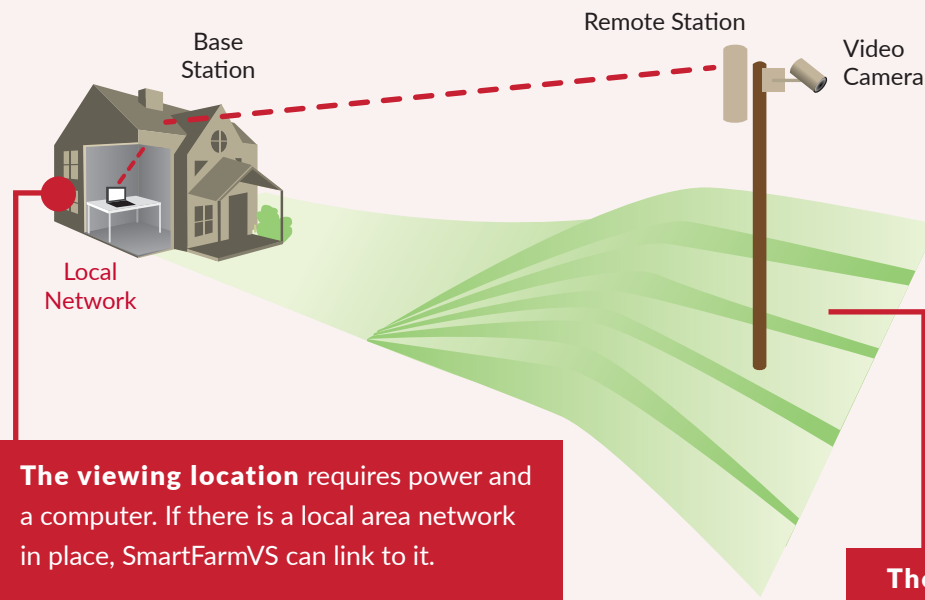

The ezWireless SmartFarmVS is a video monitoring solution engineered specifically for agriculture. With proven, reliable equipment that is easy to set up and use, you can be up and running quickly. If you are too busy to install the system yourself, your Lindsay dealer is ready to assist you.

## EZ WIRELESS DELIVERS VIDEO SURVEILLANCE UP TO 10 MILES AWAY

The ezWireless SmartFarmVS solution is a cost effective way to protect your farm against loss and become more profitable at the same time.

Using the 2.4 GHz and 5 GHz unlicensed wireless spectrum, SmartFarmVS can transmit high-quality video across many miles within a line of sight.

We designed the installation of both equipment and software to be straightforward and uncomplicated. Once you are up and running, access SmartFarmVS Surveillance through a simple-to-use application on your computer.

### Requirements

SmartFarmVS can be implemented wherever you have two locations up to 10 miles apart that are in line of sight. Obstructions are not an issue. We can enable an otherwise obstructed line of site using towers or by mounting the equipment to existing structures.

**The viewing location** requires power and a computer. If there is a local area network in place, SmartFarmVS can link to it.

**The monitored area** simply requires 110 volt power.

*SmartFarmVS Surveillance in Action*

## SET INVISIBLE TRIP WIRES

SmartFarmVS includes motion-detection capabilities for constant monitoring. Enable recording or notifications whenever there are disturbances. SmartFarmVS records activity and allows you to respond quickly, even if you are away from your desk.

*Keep an eye on your assets. We make it more affordable than you think.*

*SmartFarmVS Surveillance is everything you need for video monitoring and recording.*

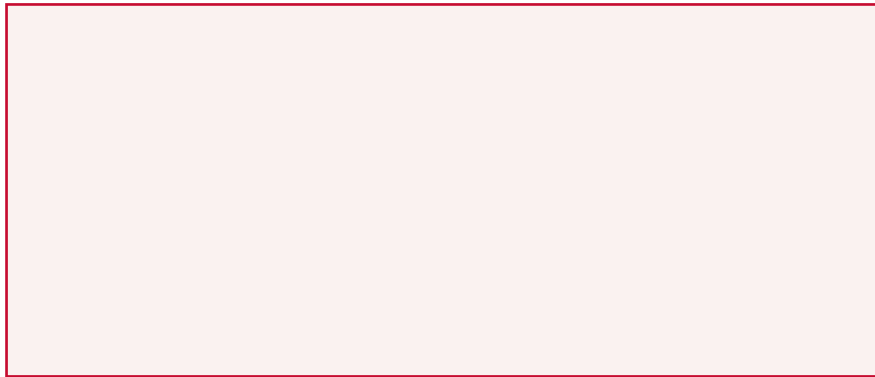

## EXPANSIVE POSSIBILITIES

While SmartFarmVS Surveillance is an all-in-one video-monitoring product, the network is designed to work with and enable future automation capabilities.

- Watch more: Expand video monitoring to multi-point services
- Watch anywhere: Add smartphone monitoring capabilities
- Interact: Extend your local Wi-Fi network to remote locations
- Automate: Use the network link to monitor and manage pump status as well as any other IP or Ethernet based equipment

SmartFarmVS: More efficient operations, less down time from theft and vandalism, and a safer workplace for you and your people.
